

Introducing Winnow

Productive. Profitable. Sustainable.

August 2023

Global leaders are rapidly deploying our solutions

>2,000

locations

67

live countries

36m meals

saved per year - 2.5x more
than our competition

2x-10x

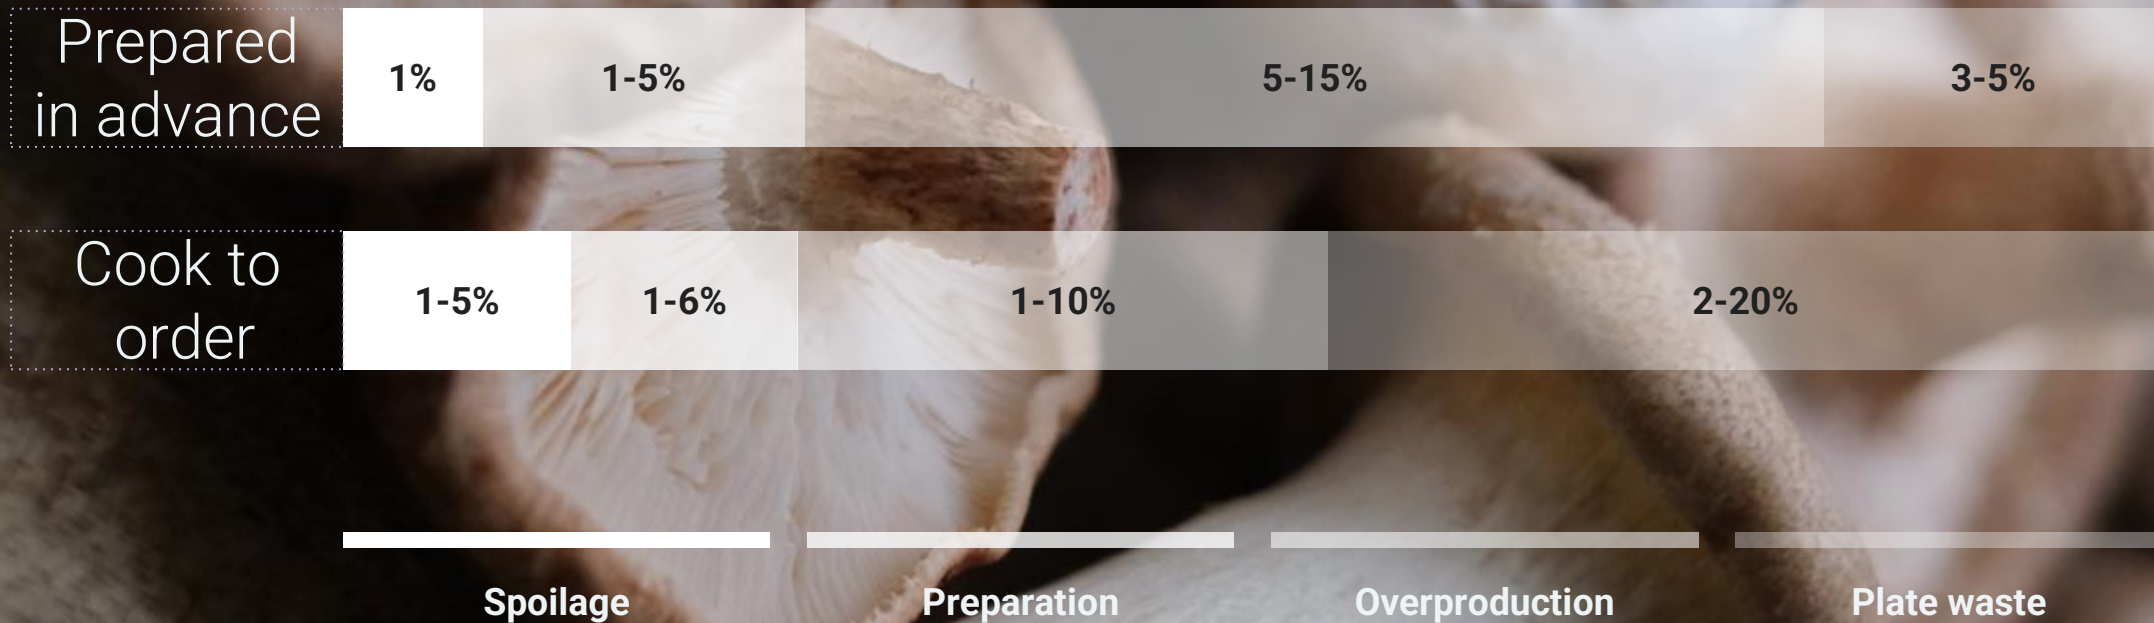

food cost savings
vs Winnov fees

61,000

tons of CO2e
avoided annually

In kitchens 5%-15% of the food you buy is wasted

Transform

harness the power of AI to enable effective food management

Pre-consumer waste

Winnow Transform provides AI-enabled food waste tracking powered by Winnow Vision. It saves your team time and improves data accuracy.

Benefits to operators:

- Food item predictions, powered by AI
- Access to food waste photos
- Maximize food cost savings with regular coaching sessions
- Simple to use; almost no training for new staff required
- Benchmark across sites
- Reduce environmental impact

Our technology is designed to halve your food waste

1. Trimming Yields

2. Overproduction

3. Spoiled Food

4. Cooking Errors

5. Plate Waste

6. Supplier Quality

What we see
in the bin

Winnow Sense

Product offering

Winnow Sense helps you automatically capture and draw insights from plate waste data and images, giving your team greater visibility and control.

Benefits to operators

- Touchless data capture
- Food cost reduction
- Gather valuable customer insight
- Benchmark across sites
- Reduce environmental impact
- Help your customers make more sustainable decisions

Plate waste audit - Baseline process

The Sense Audit provides valuable insights into the content and cost of plate waste in your business. This enables you to make operational and menu changes to reduce it.

The audit is run during your baseline and annually after, and helps to:

1 Identify food cost reduction opportunities

View waste insights by food group categories from a 24 hour period (Figure 1)

2 Make operational and menu changes with recommendations from our plate waste analysts

3 Gain more accurate costings

Identify a more precise cost per kg of plate waste and update each year based on the findings

4 Understand what proportion of your plate waste is unavoidable (e.g. bones & shells, fruit peelings)

Figure 1

Example of Sense Audit food group categories insights

Example insight

Reduction opportunity in meat waste

High value and volume of meat waste

- ❑ Meat waste represented the second highest category of waste: **7.5% of total**
- ❑ Weight totals nearly **30 kg of waste within a 24hr period**
- ❑ Meat waste is both high in value and environmental impact, for example, the 30 KG of meat wasted here equates to approx **450 CO₂e**

Review meat portion sizes or sequence of serving
(e.g. when plates are empty vs full)

Change menu offering to serve boneless meat and poultry dishes
and use the bones to make stock

Meat sources

Behavioral change

Your communications toolkit

We also additionally offer a 12 week Communications Journey - developed with London School of Economics Behavioral Science Team.

Suitable for front-of-house locations, the journey is based on insights to better engage with your customers to maximize plate waste reduction.

Key insight from LSE study

Emotion led food imagery drives consumers to more sustainable food choices.

Drive reductions with six custom posters over a 12-week campaign

Behavioral change

Your communications toolkit

Customer benefits

Engage with diners

Tailored posters connect you with your consumers

Monitor progress

Share success & refine approach over time

Simple to launch

Posters available to download in print & digital formats

Through data & insights we change behaviors at kitchen level

Daily

Reports help chefs to focus on most costly areas of waste

Weekly

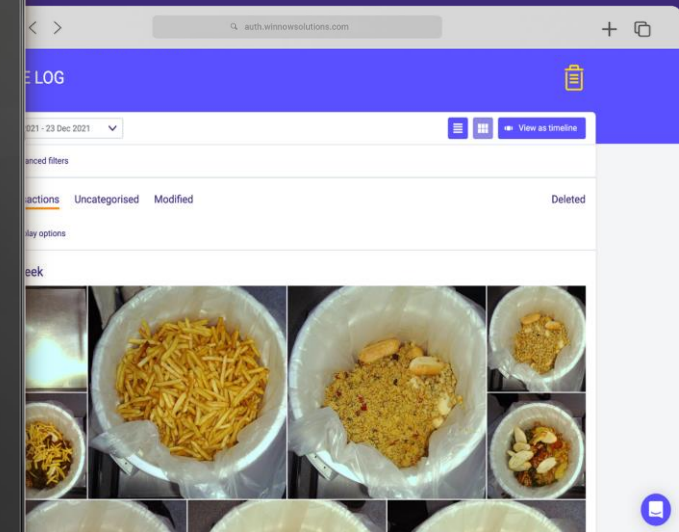

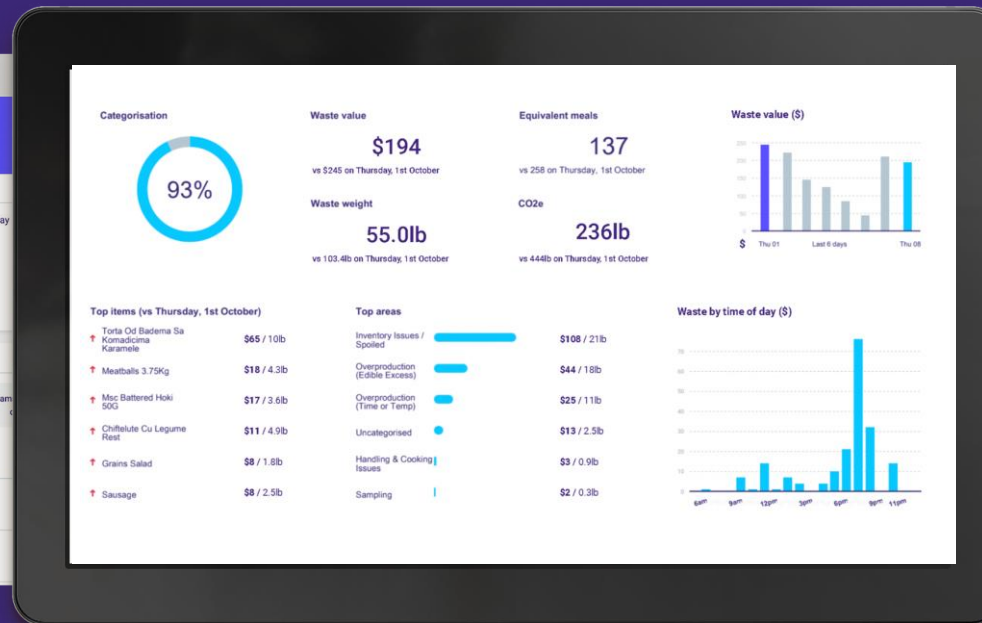

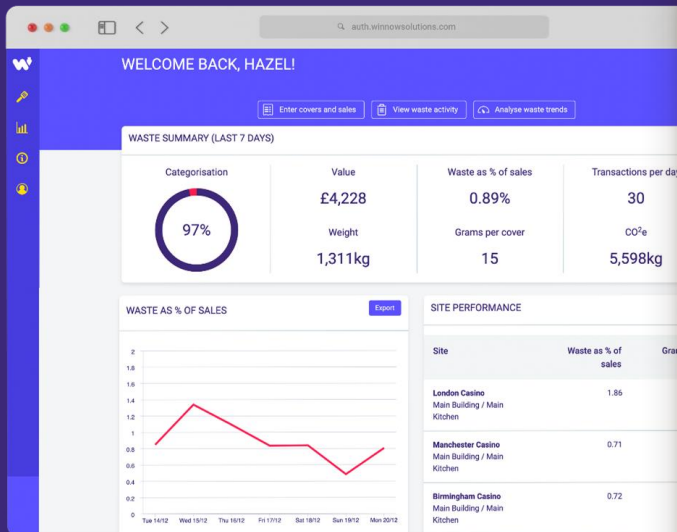

Reports help site managers review trends and track reductions

Cross-site

Reports help compare performance & create benchmarks

Custom

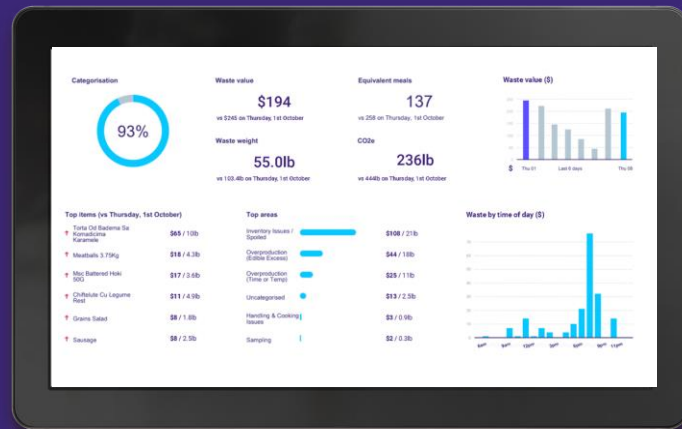

Reports are tailored to best fit your business needs

Our reporting and analytics suite provides the insights to drive reductions

Email reporting

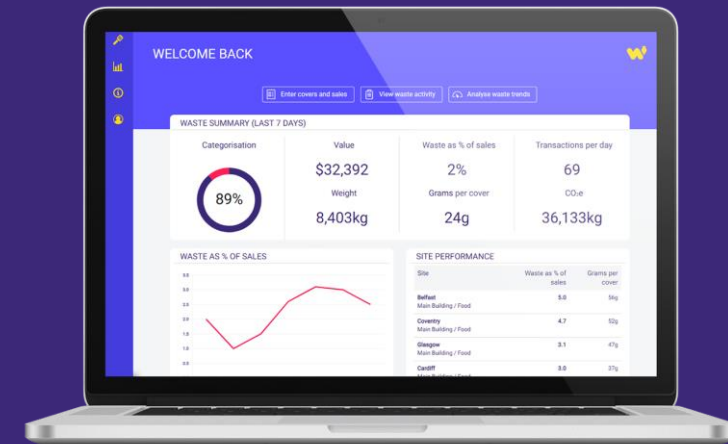

- Daily reporting for Chefs
- Weekly reporting for Managers
- Cross-site reporting for benchmarking
- Custom reporting to suit your needs

Reporting dashboard Winnow Hub

Designed to give you visibility and control across a portfolio of sites

- Zoom into individual sites or filter views for brands, regions or groups
- Access food waste image timeline to identify yield opportunities
- Track your progress against your corporate food waste reduction target
- Visualise data with customisable dashboards

We do this through targeting your insights to your operations

Overproduction & Spoilage

Reduce spoilage and optimize production or mise en place.

Savings:
1-8% reduction in food costs.

Yield management

Target trimmings and provide valuable training insights.

Savings:
1- 2.5% reduction in food costs.

Menu engineering

Visibility into customer preferences and portion sizing

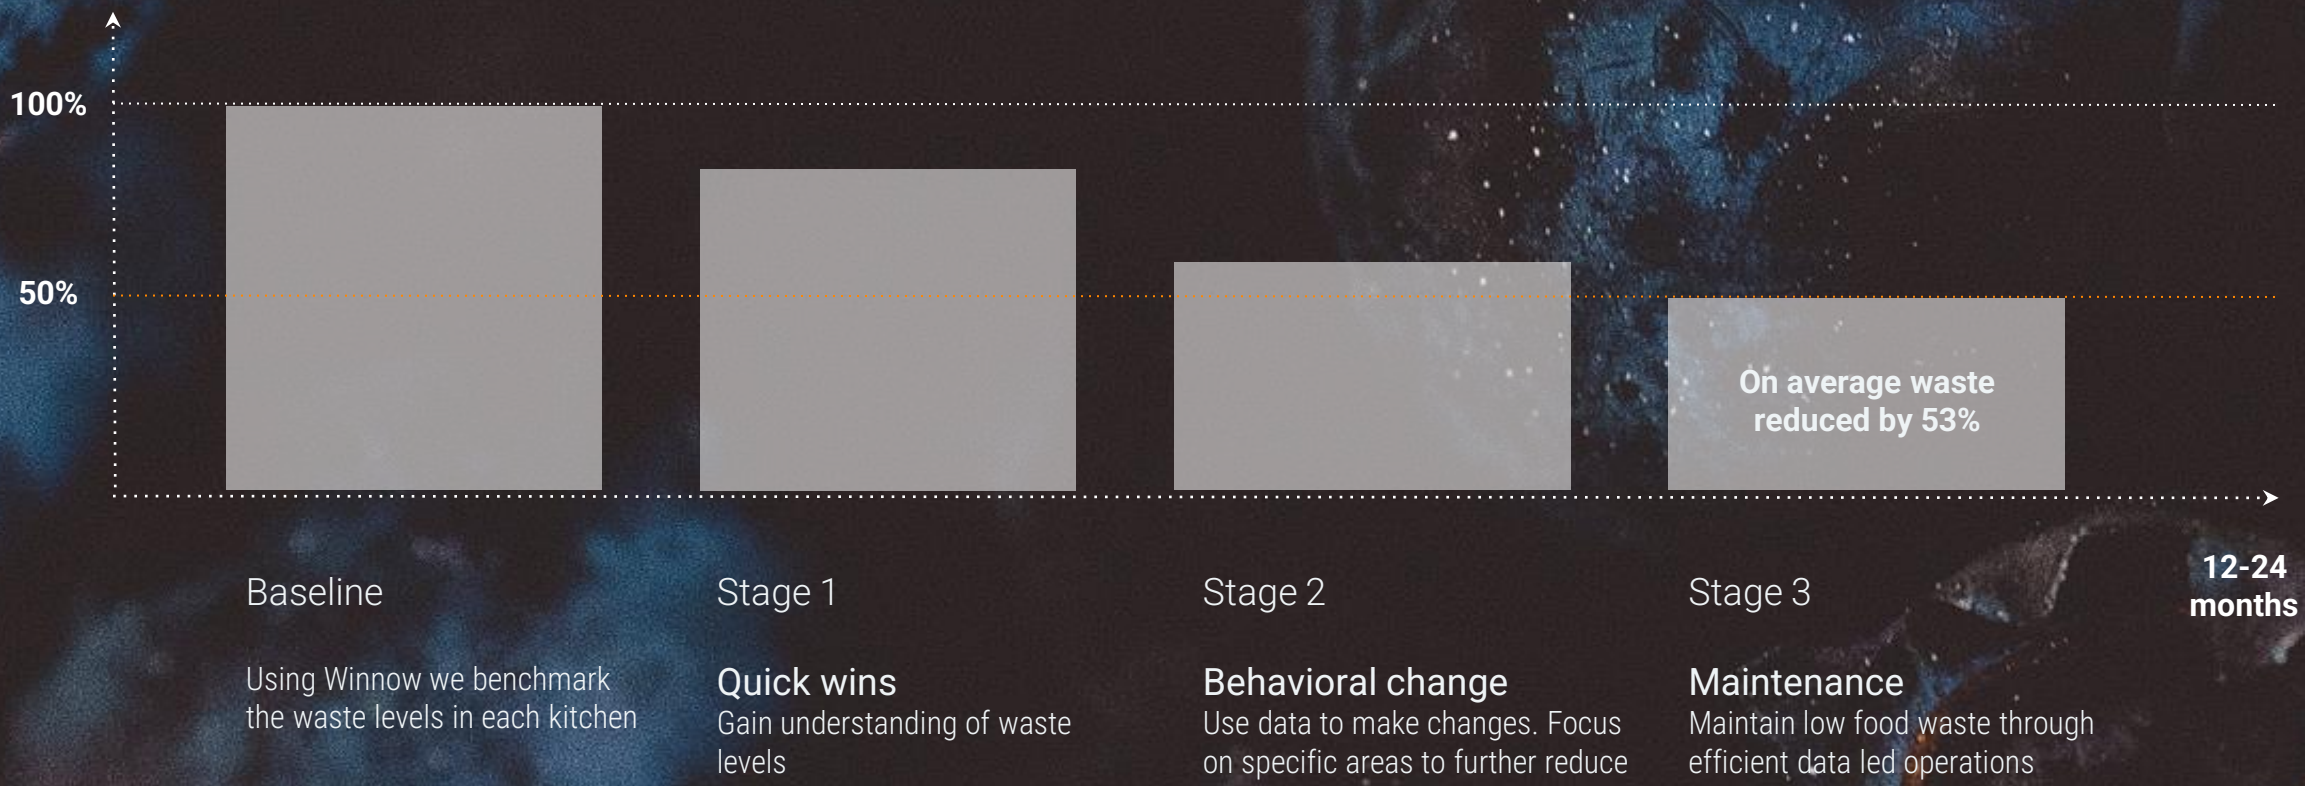

Savings:
0.5 - 1% reduction in food costs.

pre-consumer focus area

post-consumer focus area

Resulting in up to 50% food waste reduction

Why our clients choose Winnow

Powerful analytics and market leading AI performance

AI from day one

Winnow AI predicts the food waste item as soon as the system is installed and in use.

Reporting in real time

The reporting and access to data and insights is available right on the tablet. Chefs don't have to wait until the next day to receive reports if they want to check on performance after a meal service.

Multilingual options

Winnow's app and reporting is available in over 20 languages.

Rapid recording

Chefs throw food in the usual way. There is no wait-time to record a food waste transaction. Users receive the result confirmation in seconds.

Connected systems

Our systems can be remotely monitored. Software updates and improvements are seamlessly loaded as we continually improve features and user experience.

Tried and trusted hardware

Reliable

Winnow has no moving parts which we believe improves long term hardware reliability.

Clean and hygienic

Because food waste does not touch our system, there are no after meal service hygiene cleaning requirements to be HACCP compliant.

Winnow is placed in a fixed position in each kitchen. The team always knows where the tablet and bin are located. This repeatability every day, our experience finds, actually improves productivity and food waste recording compliance over time.
